

# Our Climate: We Can Save It!

**THE BAD NEWS:** global warming is very serious and happening faster than was predicted.

**THE GOOD NEWS:** we can change course and safeguard the world.

- ▶ Humans are now in charge of the climate — a stunning new level of responsibility. We **MUST** rise to this challenge. The first step? A strong climate treaty in December in Copenhagen.
- ▶ **350 parts per million is the safe and sustainable level of CO<sub>2</sub>** in our atmosphere. The current level is above 388 ppm and climbing by 2 ppm per year.
- ▶ **We must all take personal action** to reduce CO<sub>2</sub> emissions. But the problem is grave and systemic, requiring us to work together, globally for a strong international climate treaty, and domestically for robust national initiatives.
